High speed feeding device.

Fully auto corner transfer system. It transfers the lumber from the shaper into the assembler machine.

Twin table designed doubles the output capacity of the line

FJV- 486 series

High performance fully auto finger joint system designed for high capacity requirement. Twin table with double spindle finger profiles which provides top performance output.

- Width 1200mm twin table designed.
- Double spindle installed.
- Auto corner transfer system.
- High speed press machine.
- Output product resizer (optional).
- Output product collector system (optional).

Package designed continuously feeding system.

High speed 6000mm press machine.

Auto corner transfer system specialized for vertical finger joint.

Injection type glue applicator.

Finger joint assembler system.

Scoring motor, cut-off, and finger shaping motors.

Element series

Entry level finger joint line with reasonable price and performance to satisfy most requirements.

1st Element
Semi Auto Finger Joint System
4 operators required.

2nd Element
Auto Finger Joint System.
3 operators required.

3rd Element
Auto Finger Joint System
with pre-joint device.

4th Element
Fully Auto Finger Joint System.
2 operators required.

Package type multiple section feeding unit.
(Optional)

Additional in-feed table
(Optional)

Auto corner transfer system with vacuum device installed. Specialized for vertical finger joint.

High efficiency 6000mm assembler system.

Hydraulic powered infeed roller. (Optional for twin rollers).

Rhino series

Mid range finger joint lines with heavy duty structure designed.

Rhino: Auto finger joint system. The ideal finger joint line for mid range output capacity requirement. It allows both vertical and horizontal profiles.

- 800mm width working table.
- 3 operators required.
- Hydraulic powered driver system.
- Package type in-feed system (optional)

Rhino +: Fully auto finger joint system. The ideal finger joint system for automation user. Mid range output capacity. Only two operators require.

- 800mm width working table.
- 2 operators required.
- Hydraulic powered driver system.
- Length extended in-feed table (optional).
- Double spindle finger profiles (optional).

Length extended in-feed table (Optional)

Double spindle finger profiles (Optional)

Automatic feeder (Optional for FJH series).

Simplified operation. (Optional for FJH series)

High speed feed system. (Optional for FJH series)

FJH-90: Fully auto finger joint system. Specialized for horizontal finger shaping. Automation designed. Up to 90 pieces per minute.

Merlin 180DC: High performance horizontal finger joint line. Great productivity for high speed requirement. Up to 180 pieces per minute.
